Safer Lighting Solutions

Press Release

GlassGuard® to showcase SB luminaire range at UK Grain 2013

GlassGuard®, manufacturer of Europe's widest range of fragment retention lamps, will be showcasing its new SB luminaires range at UK Grain 2013, the leading event focused on the needs of the UK cereal industry.

The SB luminaires range is designed to maximise a unique combination of energy efficiency, improved lighting and safer maintenance qualities, making it suitable for warehousing and other high level lighting, such as cereal storage facilities .

GlassGuard® SB is available in various options to suit appropriate lighting requirements: LumaStat® daylight sensor control, motion sensor and digital dimming. With the incorporation of Passive Infra-Red (PIR) and photocell capabilities, GlassGuard® SB can help maximise energy savings of up to 60%.

All GlassGuard® SB luminaires are fitted with GlassGuard BlackBand® compact fluorescent fragment retention lamps. This added-value feature helps to minimise the risk of glass contamination or injury from accidental lamp breakages thus providing a safer lighting solution for all applications that have a need to protect their lighting.

“The GlassGuard® SB range of luminaires with fragment retention lamps are particularly attractive to the agricultural industry for use in barns and grain store lighting,” says Stewart Damonsing of GlassGuard®, adding, “because up to 60% energy savings can be achieved with the luminaires whilst at the same time, the fragment retention lamps will protect grain stock from glass contamination.”

GlassGuard® fragment retention lamps are treated with a technologically advanced coating which, in the event of accidental breakage, will retain all of the broken glass safely within the coating thus protecting and providing a safe lighting solution for environments such as barns and grain stores.

UK Grain is being held at the East of England Showground, Peterborough on 6th November 2013. GlassGuard® will be on Stand No. 24.
